

Description

Turn your iPad and iPhone into a wireless television! Use this app with a Sat>IP compliant server device to receive live TV anywhere in your home network.

App Features

- Watch and timeshift live digital television on your iPad or iPhone
- Record TV shows directly to your iPad or iPhone - even when the Elgato Sat>IP app is running in the background
- Use iTunes to transfer recorded shows to your Mac or PC
- View up to seven days of program guide (EPG) data including details
- Email, tweet and print program details or screenshots to share what you're watching
- Built-in web browser in portrait mode – watch TV and surf the web at the same time! (iPad)
- Teletext (iPad)

Important Notes

- The amount of EPG and teletext data varies by broadcaster and may not be available.
- Performance may be limited by network bandwidth. 802.11n Wi-Fi is recommended.
- Elgato Sat>IP supports MPEG-2 and MPEG-4/H.264 video in standard definition as well as DVB radio, if available. High definition channels, encrypted programs and/or DVB-T2 broadcasts are not supported.

Requirements

- Sat>IP compliant server device
- iPod touch (4th generation or later), iPhone (iPhone 4 or later) or iPad
- iOS 5.1 or later
